1. Launch a modern internet browser.

2. Go to https://mysignins.microsoft.com

3. Login with the STN user ID, adding “@nebraska.gov” after the firstname.lastname. Ex. (first.last@nebraska.gov)
4. When the ADFS page comes up, sign in with the STN user ID adding “@nebraska.gov” and password for that account.

5. When the mysignins page reloads, it may show a screen that will display all the places with account activity. If a location appears out of the ordinary (signed in from Russia for example), please contact the OCIO service desk immediately.
6. Click Security Info on the left side of the screen.

   ![Security info]

   a. If this is blank, proceed to step 7.

   ![Security info](Security info)

   b. If there is a field called security questions, go to step 12.

7. Add security questions. This is important should the user replace their device and need to reconfigure the Authenticator app.

8. Click +Add Method button.
In the dropdown, select security question (then hit Add button).

9. In each dropdown, select a question which the user can remember the answer. Type that answer in the proceeding line. Continue until all 3 questions are answered.

10. Click the Done button.
12. Click +Add Method.

14. Install the Microsoft Authenticator app on the user’s mobile device if not already completed.

15. Click Next on this prompt.
16. On the mobile device, open the Authenticator app and add a new authenticator application. This can be done by tapping the Add if this is the first account, or the + symbol in the top right corner of the screen. **Do not remove any authenticator applications if they are present.**

![Authenticator app](image1.png)

17. Select Work or School Account. (A prompt may pop up to allow the Authenticator App access to the device camera. Hit the OK or Allow button.)

![Add account](image2.png)

18. Click next on the computer screen

![Set up your account](image3.png)
19. This will display a QR code (box with a strange design in it). Use the mobile device to scan this code. Line up the code in the crosshairs on the mobile device.

20. On the mobile device, tap Approve.

21. The user will then be prompted on the mobile device to approve the initial configuration.

22. Click the approve and the X on the computer.

23. Sign out on the computer in the upper right-hand corner, close the browser, and relaunch the browser.
24. Go back to https://mysignins.microsoft.com

25. Click on Security Info.

26. If working, it will send a notification on the mobile device for Approval.

27. Approve.

28. The page should then load in the computer browser.

29. STN Resources work best by using the Authenticator app, to ensure this is the default option while on the Security Info page look for the following:

   Default sign-in method: Microsoft Authenticator - notification

If not set to the authenticator app, it is recommended this be changed.

30. Close Browser.

31. Setup completed.
