

PROJECT PROFILE:
N-7 between Bassett and Springview

QUICK FACTS

Category: Construction

Project: N-7 between Bassett and Springview, 2-lane highway modernization

Estimated project cost: \$2M

Length of project: 2 miles

WHY IT WAS SELECTED

Big Improvement for Your Buck: This small, cost-effective project straightens curves and improves shoulders on a two-mile stretch of N-7 between Bassett and Springview. With one of the higher crash rates in the region, this project addresses safety needs on a regionally significant segment.

Builds on Previous Investments: Previous improvements have already been made under the asset preservation program. The modernization of this segment will potentially allow for the redesignation of the roadway to US 183, which would provide improved route connectivity.

Improves Service for Freight Traffic: These improvements will help support the transport of turbines and other wide-load vehicles while enhancing safety for all travelers.

Regional and Local Support: At NDOR's recent stakeholder meetings, participants identified this stretch of highway as a top priority in the region. With the increased truck traffic from transporting turbines, participants were particularly interested in safety improvements at this location.
