

# Memorandum

---

DATE 2026-01-26  
TO All Bentley CAD Users  
FROM Jeremy Stearns, CAD Manager  
THRU Jon Starr, Digital Delivery Manager  
Brandie Neemann, Roadway Design Engineer  
SUBJECT NDOT Bentley Software Updates

The dedicated testing phase for 2024 Bentley software has been officially abandoned, effective immediately. We are shifting our full quality assurance focus to the most recent release of 2025 Bentley software to better align with our agency's needs. Once QA testing is completed an external testing and implementation plan will be shared with a tentative go live of Q2 2026.

The decision to abandon the 2024 testing suite in favor of the 2025 version is driven by the number and severity of bugs encountered during testing, as well as feedback from consultants and partner DOTs. Reported critical issues include problems with the sheet index, civil labeler, MicroStation report exporting, and dynamic cross sections, among others.

As we pivot our focus to the 2025 Bentley software suite, we are better positioning ourselves to innovate and align with Digital Delivery initiatives. Thank you for your continued support.
